Heat-transfer Printing

Heat-transferring is a superior printing process that can create multicolored, highly detailed designs.

The design remains smooth because of the method used. Heat-transferring lanyards offer durable imprinting onto these lanyards providing you with an imprint that will last for the life of the lanyard, no more rubbing off or fading. The cost of one color has no much difference from for multi colors.

Hot Stamping (Gold & Silver) Printing

Silk-screen & Slik-screen Emboss Ink Printing

A fine mesh screen is made from the customer's artwork. The screen is laid on top of the material and the colored ink is applied over the screen. A squeegee pushes the ink through the mesh screen to create the design beneath on the fabric.

Silk-screen printing is effected one by one colors, the higher unit price. Silk-screen printing mold could be made quickly, mod revising relatively convenient and colors matching exactly. For Silk-screen printed lanyard, the lanyard bottom color is normally the color dyed out from yarn. Silk-screen printing unit price changes not much because of quantity.

What is a Lanyard?

A lanyard is a strap or a cord that is worn around the neck to hold an identification badge, mobile phone, whistle, keys or other small object. You can see lanyards in use everywhere by businesses, schools, hospitals, at special events, conventions and in many other activities.

Nowadays, the use of Lanyard is not only as a holder of a badge and name card like the past, some of them have special function and practicality, such as: Mini-coin bag lanyard, mobile phone lanyard, ipod lanyard, USB lanyard etc. All of these lanyards look not only beautiful but also economical and practicality. Beside, lanyards have been thought as a kind of fashion, a kind of method of advertisement, a kind of wonderful promotion gift. Lanyards can also be used as an advertising tool with a customized logo or name. Your company's logos, labels, advertisement words, website and telephone number can be printed, woven or heated transferred on to the lanyard to show your company public perfect appears and to promote your company to be an better success.

Standard Lanyard (Silk-screen / Heat-transfer printing) Nylon Lanyards

Looking for the most detail possible on your custom lanyard design?

Imprinted Nylon lanyards offer a surface that allows for high detail silk-screening. The Imprinted Nylon lanyards are a perfect option for detailed logos or images. Imprinted Nylon lanyards are slightly thicker than the Imprinted Polyester lanyards, and reveal a more shiny appearance than other types of custom lanyards we offer.

Premium Lanyard (Jacquard Weaving) Woven Lanyards

Woven lanyards are tough and durable. These premium quality lanyards comprise a satin ribbon that has your design woven into it and then sewn onto a polyester base. Jacquard weaving is an automated method of raising and lowering yarn on a loom to produce design.

Premium Lanyard (Silk-screen) Reflective Lanyards

Reflective lanyards provides exceptional reflective quality for use when visibility is important, reflective lanyards are great for night time safety use, hospital (nonabsorbent and wiped clear) and event use. Reflective are can be centered in the middle or separated as 2 line on the edges of lanyard.

Multicolour bring eco product to life

Eco bag series have become more popular because of their reusability and durability instead of paperbags requires large quantities of wood. This series includes standard non-woven bag, multidesign non-woven bag, multifunction non-woven bag and jute bag.

We specialize in heat transfer printing for both imported and local made eco bags. Unlike the multicolor printing, heat transfer printing is able to incorporate your custom made design such as full colour photos. With this heat transfer printing technology, we are now able to enhance many designs and turn it into effective marketing tools.

Premium Gift Soft PVC items

PVC is a hard material. It is flexible, extensible and a plasticizer. PVC is given special use properties that are comparable to those of rubber.

At the same time the material remains dimensionally stable. Soft PVC can be used in a variety of ways to handle a wide range of custom-made products with spot color printing. Pastes consisting of a mixture of PVC and plasticizers extend the range.
